AGROVET POINT OF SALE (POS) SYSTEM

Software Development Proposal

Prepared for: Agrovet Store

Prepared by: Robert Kiprotich

Date:17/9/2026

Project: Agrovet Point of Sale & Business Management System

Estimated Development Period: 2 Weeks

1. Project Overview

The proposed Agrovet Point of Sale (POS) System is a web-based business management solution designed specifically for agrovet stores.

The system will manage sales, inventory, veterinary and agricultural products, suppliers, purchases, customers, stock movements, expenses, users, payments, returns, reports, analytics, and low-stock and expiry alerts.

The system will provide management with real-time visibility into sales, stock levels, profits, purchases, and overall business performance.

2. Project Objectives

- Automate daily sales.
- Improve inventory accuracy.
- Reduce stock losses and manual errors.
- Track veterinary medicines and agricultural products.
- Monitor product expiry dates.
- Track purchases and suppliers.
- Provide accurate sales and financial reports.
- Improve customer management.
- Provide role-based access for employees.
- Give management real-time business insights.
- Have multiple branches

3. Core System Modules

Dashboard

- Today's sales
- Daily transactions
- Total revenue
- Gross profit
- Low-stock products
- Expiring products
- Supplier balances
- Customer balances
- Recent sales and purchases
- Sales trends
- Top-selling products

Point of Sale

- Product search
- Cart and quantity management

- Discounts and tax configuration
- Customer selection
- Receipt generation and printing
- Sale cancellation
- Sales returns

Product & Inventory Management

- Product name, SKU, product number, category, brand and unit
- Buying, selling and wholesale prices
- Current and minimum stock
- Supplier, batch number and expiry date
- Stock adjustments
- Agrovet products such as medicines, feeds, seeds, fertilizers, pesticides, herbicides, fungicides, equipment and supplements

Purchasing

- Purchase orders
- Supplier purchases
- Stock receiving
- Purchase invoices and costs
- Supplier balances
- Purchase returns
- Batch and expiry recording
- Automatic inventory updates

Supplier Management

- Supplier profiles and contacts
- Supplier products
- Purchase history
- Outstanding balances
- Supplier payments
- Statements and reports

Customer Management

- Customer registration
- Sales history
- Credit limits
- Outstanding balances
- Customer payments

- Statements
- Credit sales
- Customer reports

Sales Returns

- Locate original sale
- Select returned products and quantities
- Refund calculation
- Stock adjustment
- Return reasons and reports

Expense Management

- Rent, electricity, transport, salaries, internet, repairs, stationery and other expenses
- Expense categories
- Expense reports
- Date filtering
- User tracking

User & Staff Management

- Administrator – full access
- Manager – sales, inventory, purchases and reports
- Cashier – POS and assigned sales
- Storekeeper – inventory and stock operations
- Veterinary officer-manages prescriptions
- Sale Clerks-manages general sales
- Authentication, permissions, activity logs and password management

Reports & Analytics

- Daily, weekly and monthly sales
- Sales by cashier, product, category and payment method
- Current stock, low stock, valuation and stock movement
- Expired and expiring products
- Revenue, gross profit, expenses and estimated net profit
- Customer and supplier balances
- Purchasing reports
- PDF and Excel exports

Audit & Activity Logs

- User logins
- Sales creation/cancellation

- Product creation and price changes
- Stock adjustments
- Purchases
- Returns
- Customer payments
- Supplier payments

Technical Architecture

- Backend: Django + Django REST Framework
- Frontend: React + Vite
- Database: PostgreSQL or MySQL
- Linux server, Nginx, Gunicorn/Daphne, SSL/HTTPS and automated backups
- Optional integrations: M-Pesa,receipt printers, SMS, WhatsApp and email

16. Development Milestones

Milestone	Duration	Deliverables	Cost
Requirements & System Design	Week 1	Requirements, database design, architecture, roles, UI/UX and specifications	KES 15,000 (completed)
Authentication & Administration	Week 1	Authentication, users, roles, permissions, staff and audit foundation	(completed)
Products & Inventory	Weeks 1	Products, categories, brands, stock, batches, expiry	(completed)
POS & Sales	Weeks 1	POS, search, cart, discounts, payments, receipts, credit and returns	
Purchases & Suppliers	Week 2	Suppliers, purchase orders, receiving, invoices, balances and returns	
Customers & Credit	Week 2	Customers, credit sales, balances, payments and statements	15,000
Reports & Dashboard	Week 2	Dashboard, sales, inventory, profit, expense, supplier/customer reports, PDF/Excel	
Testing, Deployment & Training	Week 2	Testing, bug fixes, security, deployment,	

		SSL, backups and training	

19. Optional Features

Feature	Estimated Cost
M-Pesa API Integration	KES 5,000

Third-party service charges, SMS costs, M-Pesa transaction charges, hosting, domain registration, and hardware costs are excluded unless specifically included in the final agreement.

20. Hardware Requirements

- Desktop computer or laptop
- Receipt printer
- Router/network equipment
- Optional customer display

21. Hosting & Infrastructure

- Linux server
- PostgreSQL database
- Nginx
- Application server
- HTTPS/SSL
- Automated database backups
- Server monitoring

Hosting costs depend on the selected provider and server specifications.

22. Testing & Quality Assurance

- Authentication

- POS transactions
- Inventory calculations
- Stock deductions and receiving
- Returns
- Payments and credit
- Reports
- Permissions
- Data validation
- Security
- Performance
- Backup and recovery

23. Training

- System login
- Product creation
- Stock management
- Sales
- Returns
- Purchases
- Customers
- Suppliers
- Reports
- User management

24. Support

The development package includes a 30-day post-deployment bug-fixing period. Bugs related to agreed functionality will be fixed at no additional development cost. New functionality or major changes outside the agreed scope will be quoted separately.

Support Plan	Cost
Technical Support	KES 6000(yearly)

26. Project Deliverables

- Fully functional Agrovet POS system
- Source code
- Database structure

- Production deployment
- Authentication and permissions
- POS module
- Inventory management
- Purchases
- Customers
- Suppliers
- Reports and dashboard
- Sales and purchase returns
- Batch and expiry tracking
- User documentation
- Training

27. Scope Management

The quoted development cost is based on the functionality described in this proposal. Major functionality outside the agreed scope will be evaluated and quoted separately.

- Mobile applications
- Multi-company architecture
- Advanced accounting
- External ERP integration
- Complex tax integrations
- AI features
- Advanced offline synchronization
- Additional payment gateway integrations

28. Conclusion

The proposed Agrovet POS System will provide a centralized platform for managing sales, inventory, purchases, customers, suppliers, expenses, and business reporting. The system will reduce manual processes, improve stock accuracy, provide better visibility into business performance, and support informed business decisions.

TOTAL DEVELOPMENT COST FOR AGROVET POS: KES 30,000

ESTIMATED DEVELOPMENT PERIOD: 2 WEEKS

SOFTWARE DEVELOPMENT PROJECT COMMENCEMENT AGREEMENT
